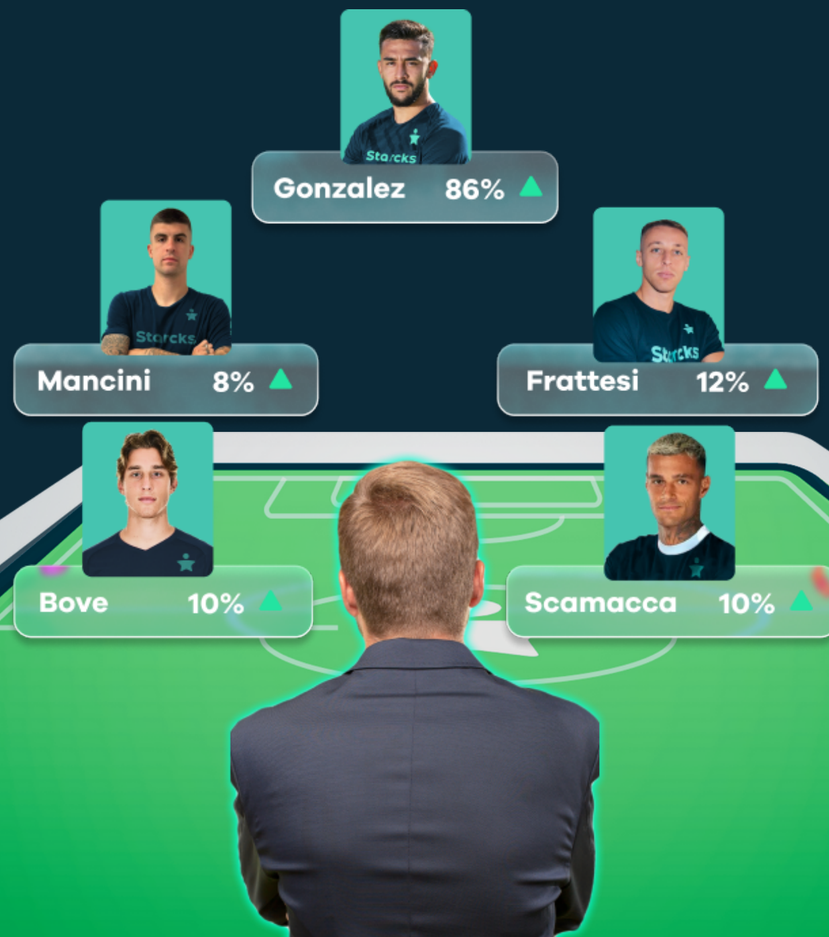
WHAT IS STARCKS

BRIEF INTRO TO THE PLATFORM

Starcks is your gateway to a world where soccer meets the future of cryptocurrency.
Imagine being more than a fan: a real manager of your fantasy team! With Starcks, your passion for soccer comes to life in a whole new way. Here, you have the opportunity to "buy" and "trade" the tokens of the players you love most, experiencing their victories as if they were your own. It's like having the power to form the team of your dreams and lead it to success, all in the palm of your hand.
Join us at Starcks and turn your enthusiasm for soccer into a real winning strategy!

STARCKS GOAL

Starcks has a dream: to make sure that you, a soccer fan, are not just a spectator, but a real player in the world of your favorite sport. Imagine being able to actively contribute to the successes of your favorite soccer players, to feel them a bit like your own, in a game that combines passion for soccer with the excitement of finance. That's what Starcks is all about: creating a community where you can make a difference, where every goal, every win, belongs to you a little more. Here, your cheering turns into strategy, and your sports idols become part of your team in an exciting and engaging adventure.



The Star Token

In the world of Starcks, the Starcks Token ($STK) is the key that opens all doors. Think of $STK as your magic currency for getting into the game: with it, you can "buy" tokens from your favorite soccer players, Star Player Tokens (SPT), which open up a world of exclusive experiences and special rewards, just as if you were in the front row for every action of your idols.And it doesn't end there!
issuance is set strictly at a maximum, or "hardcap," of $102 million SP This choice is not random, but aims to create a truly sustainable and deflationary game economy. In practice, by limiting the number of $STK available, we ensure that the value of your investment and your involvement in the game can grow over time, just as in a well-played game, where strategy and the rarity of moves make all the difference. It's a way to ensure that while you're having fun and competing, your enthusiasm and engagement can be put to good use in the world of Starcks.
With $STK, you not only trade and collect SPT needed to participate in THEGAME, but you also participate in exclusive initiatives that make the experience on Starcks even more exciting Get involved, get in the game with us, and become an active part of your passion for soccer!

The Star Player Token

Star Player Tokens (SPTs) are the key to immersing yourself in Starcks Fantasy Football Game, transforming the way you experience soccer. Without SPTs, you can't enter this exciting virtual playing field. Think of SPTs as your dream team in digital format: each token represents a player you can field in your fantasy lineup. By purchasing and managing these tokens wisely, you will have the opportunity to compete, strategize and celebrate every goal, assist and performance of your chosen players, just like a seasoned soccer manager. In short, to kick-start your career as a manager in Starcks Fantasy Football Game, SPTs are absolutely essential. Get ready to experience soccer in a whole new way, all based on your passion and strategic choices!

For each soccer champion who joins the world of Starcks, a Star Player Token (SPT) is created with a very specific rule: upon its debut, or "listing," on the app, the SPT has a "hardcap," or maximum quantity set at 10 million units. This quantity is designed to balance supply and demand equitably: half of these, so 5 million SPTs, go directly to you and the enthusiast community, ready to be bought, traded, and used in the game. The other half, also 5 million, is set aside in a kind of "strategic reserve" managed by the intelligence of Starcks, our Star Algo, which burns them depending on player performance, providing balance and dynamism to the game.

The Star Player Token

A key detail is that the SPT does not have an "expiration" date: once issued, it accompanies the player's career for its entire duration and even beyond, becoming an integral part of your virtual manager's portfolio on Starcks. This long-term approach allows you to invest in players' careers, following their evolutions, victories and challenges, in a bond that goes beyond mere playing time. With Starcks, each SPT is a piece of soccer history that you hold in your hands, ready to tell sports success stories for years to come.

TOPIC PLATFORM

01

HOW TO USE THE PLATFORM

Here's how to get into the game with Starcks, step by step:

1

Sign Up Easily:
Register on Starcks and create your account to get started.

2

Upload Your Funds:
Log in and add funds to your account. You can use your credit card or opt for cryptocurrencies, choose whichever method you prefer.

3

Explore the Exchange:
Once inside, you will find the Starcks exchange. Here you will be able to see the current value of the Star Token (STK) and keep abreast of price changes.

4

Choose and Buy:
Decide how many STKs you want to buy. The price may be fixed or change according to market trends, so choose carefully.

5

Confirm and Go:
After you confirm your choice, the transaction completes and the purchased STKs go straight into your digital wallet.

It's that simple! With these steps, you will be ready to dive into the world of Starcks and begin your adventure in digital soccer.

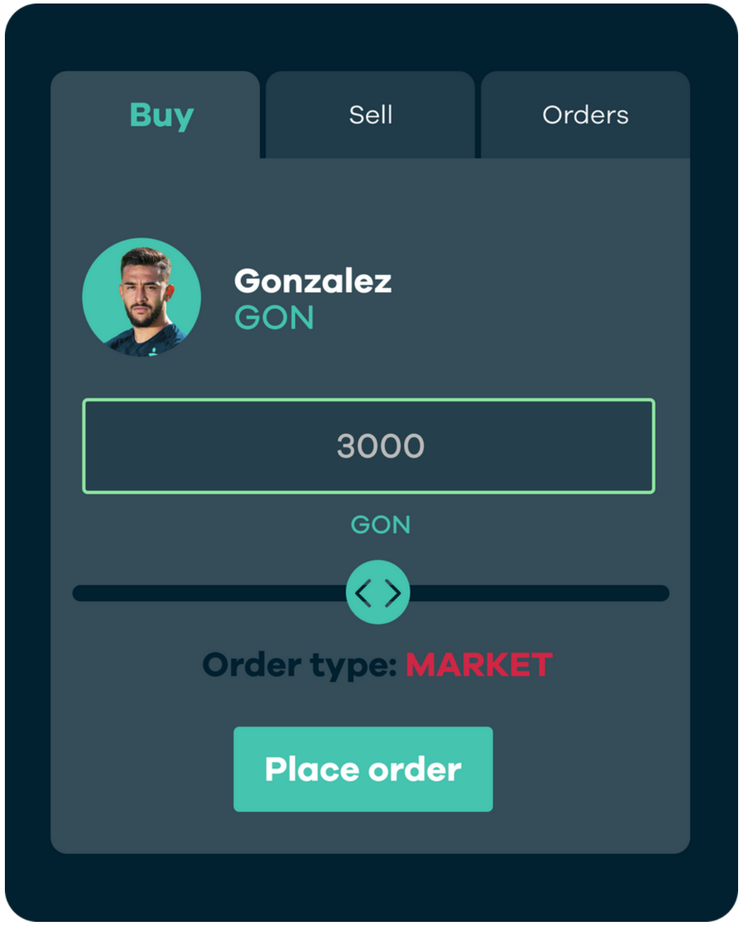
02

How to use the Exchange on Starcks

At Starcks, buying and selling your Star Player Tokens (SPT) is a dynamic and engaging experience, just like watching a live soccer game. Here's how it works:

Buy at Market (Market):

This option is like making a decisive move in the field; you choose the amount of SPTs you want and immediately buy them at the current price in the market. The price you pay is determined by market forces at that precise moment, based on the SPTs that other users are selling. It's a quick and direct action, ideal when you want to secure your favorite player's tokens right away.

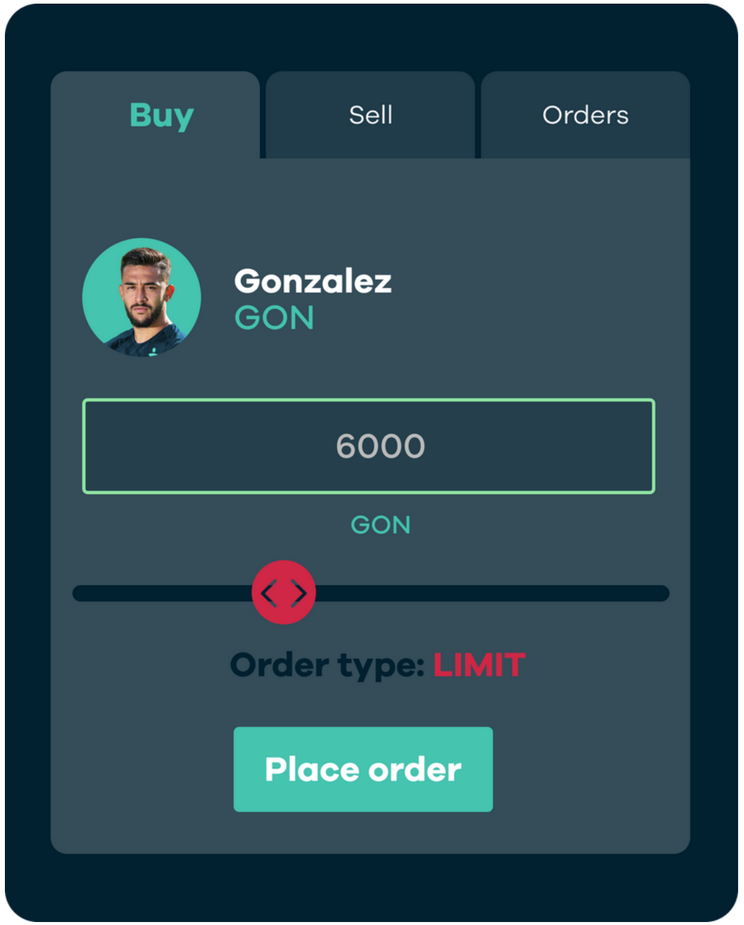


02

How to use the Exchange on Starcks

Create an Order (Limit):

This move is more like planning a game strategy in advance. Set the price you are willing to pay for a certain SPT, a little lower (if you buy) or a little higher (if you sell) than the current market price, and wait. The order will be executed only if someone in the market decides to sell their SPT at that price. This is a tactic that requires patience, but it can lead to excellent buying opportunities.

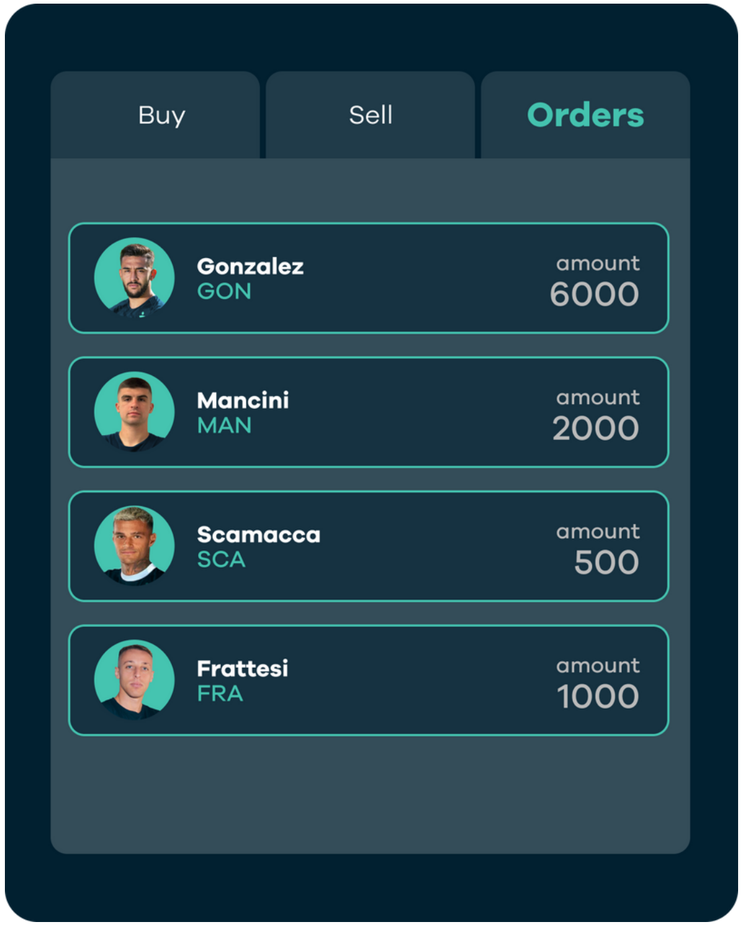


02

How to use the Exchange on Starcks

The Order Book:

Your strategic ally in this buy and sell game is the Order Book. Here you can see all the buy and sell offers in real time, allowing you to assess the market situation and plan your next move. Keeping an eye on the Order Book helps you better understand when it is time to bid, buy at the market, or wait for conditions to change in your favor.



In summary, at Starcks you have total control over how and when you want to move in the SPT market. Whether you choose to act quickly and buy in the market, or prefer to wait and place a strategic order, the important thing is to always keep an eye on the Order Book to make informed decisions. With the right strategy, you can turn your passion for soccer into a real adventure in the world of sports tokens.

03

The Star Algo and the Token Burn.

Starcks' algorithm, known as Star Algo, is an innovative component underlying the dynamics of player tokens, called Star Player Tokens. Here is how it works in a simple and straightforward way

Operation of the Algorithm:

Performance Evaluation:
At the end of each game, the algorithm evaluates players' performance based on reliable statistical data. This score reflects how well or poorly the player played.

Impact on Token:
Based on the score obtained, the algorithm decides to proportionally decrease the amount of tokens available to that player. This process is known as "burn" (if tokens decrease).

Burn Mechanism:
Burn of Tokens: If a kicker performs according to expectations, the algorithm can automatically "burn" a certain amount of his tokens. This means that these tokens are removed from circulation, reducing the total supply. Tokens are taken from a pool of 5 million

03

The Star Algo and the Token Burn.

Effect on Value:
By reducing the number of available tokens (burn), the value of remaining tokens may increase as they become rarer and, potentially, more desirable to platform users.

Goal of the Algorithm:
The main goal of Star Algo is to tie tokens to the actual performance of players, making the trading and playing experience on Starcks dynamic and closely connected to the world of real soccer. Starcks users, therefore, not only enjoy collecting tokens and using them in the Starcks game, but also become active participants in the success of their favorite players.

In essence, Starcks' algorithm and burn mechanism help create a live and responsive virtual marketplace, where performance in the field has a direct and tangible impact on the digital world of tokens.

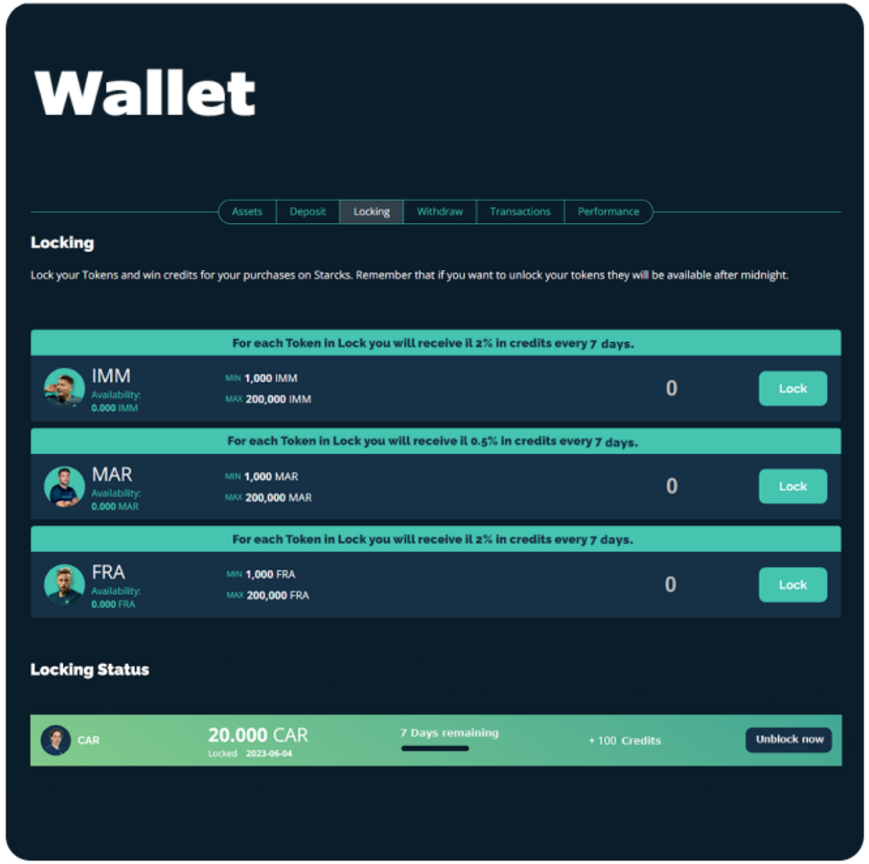
04

WHAT IS LOCKING

"Locking" on Starcks is a special wallet feature that allows you to "freeze" a certain amount of Star Player Tokens for a set period of time, in this case a week. Think of it a bit like setting aside your tokens in a digital safe, where you can't touch them for a while, but you receive benefits in return.

How Locking Works:

Blocking Tokens:
Decide how many of your Star Player Tokens you want to block and transfer them to a dedicated section of the wallet. Once locked, these tokens cannot be used for play, nor can they be sold or traded.
Rewards: In exchange for locking your tokens, you receive a reward in the form of credits simply by holding your tokens in locking. Each credit is worth 0.001 Euro and you can spend them in the Starcks Store.



04

WHAT IS LOCKING

Locking features:

Passive Benefit:
Locking allows you to get extra from your tokens without doing anything; you simply keep them locked for a while and get credits in return.

Temporary Commitment:
Commitment is only temporary, so after a week, your tokens are unlocked and you can decide whether to lock them again, use them in the game, or sell them.

In summary, locking is a way for Starcks users to set aside a portion of their tokens while getting a benefit in return, thus increasing the overall value of their participation in the Starcks platform without having to be actively involved in gaming or trading.

01

WHAT IS THE GAME

Starcks Game is an evolution in the world of fantasy soccer and fantasy football games, taking the concept of virtual sports competition to a whole new level. Here's how it works:

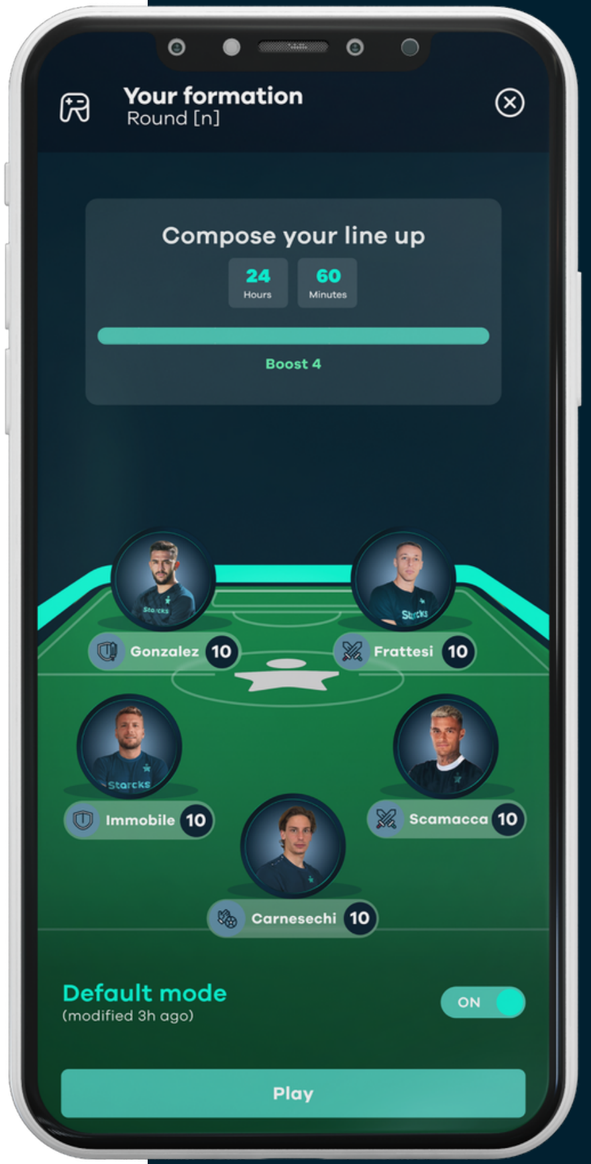
01

WHAT IS THE GAME

Compose Your Team:

Player Selection:
In Starcks Game, you have the ability to create your team using up to 5 Star Player Tokens by allocating for each the amount of tokens to be allocated in the game. These tokens represent real soccer players, and your skill in choosing the right combination can make all the difference.

Varied Competitions:
You can test your team in a variety of competitions. From the "all season" tournament, where the prize pool exceeds €20,000, to the "Biweekly" tournament with prizes reaching €80,000.



01

WHAT IS THE GAME

Starcks' Unique Score:

1

ALGO v6:
Unlike traditional fantasy soccer scoring systems, Starcks Game uses a proprietary algorithm, ALGO v6, to determine player scores.

2

Based on Real Statistics:
Scores are not awarded through classic grades but are calculated based on the actual performance of players on the field, considering a wide range of real match statistics.

01

WHAT IS THE GAME

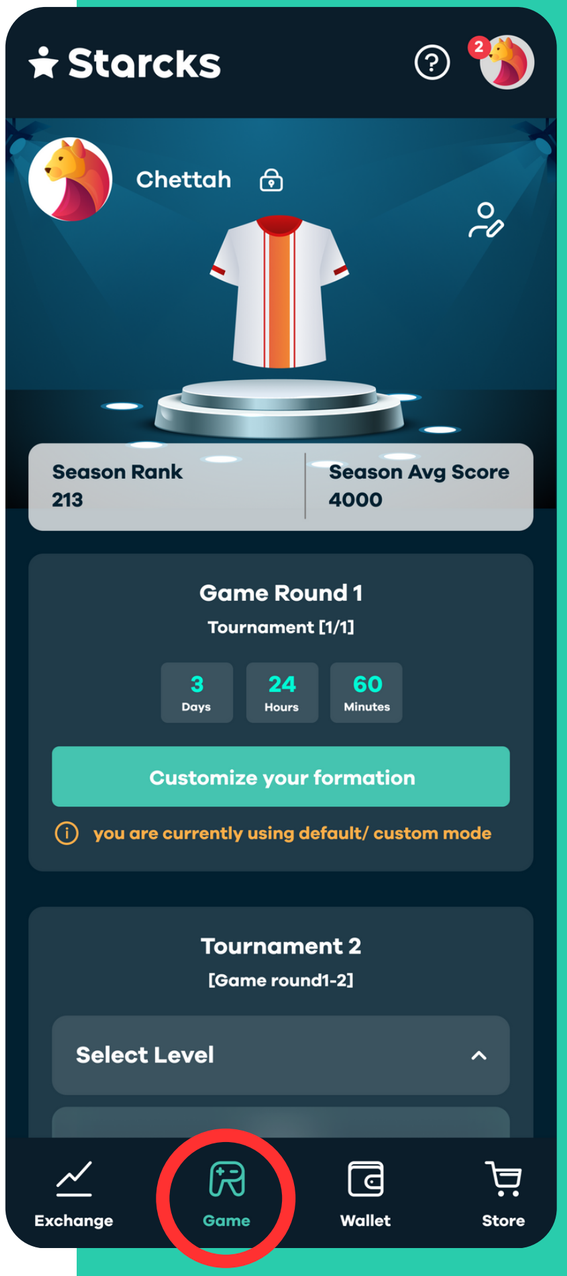
How to Participate:

Accessing the Game:

To dive into the Starcks Game action, visit the Starcks.IO platform and select the GAME section.

Strategy and Competition: Once inside, you can compose your ideal lineup, leverage your strategic skills and challenge other users in exciting tournaments to win substantial prizes.

Starcks Game is not just a fantasy soccer game; it is an adventure that combines a passion for soccer with strategy and competition, offering an immersive and rewarding experience for sports and digital game fans.



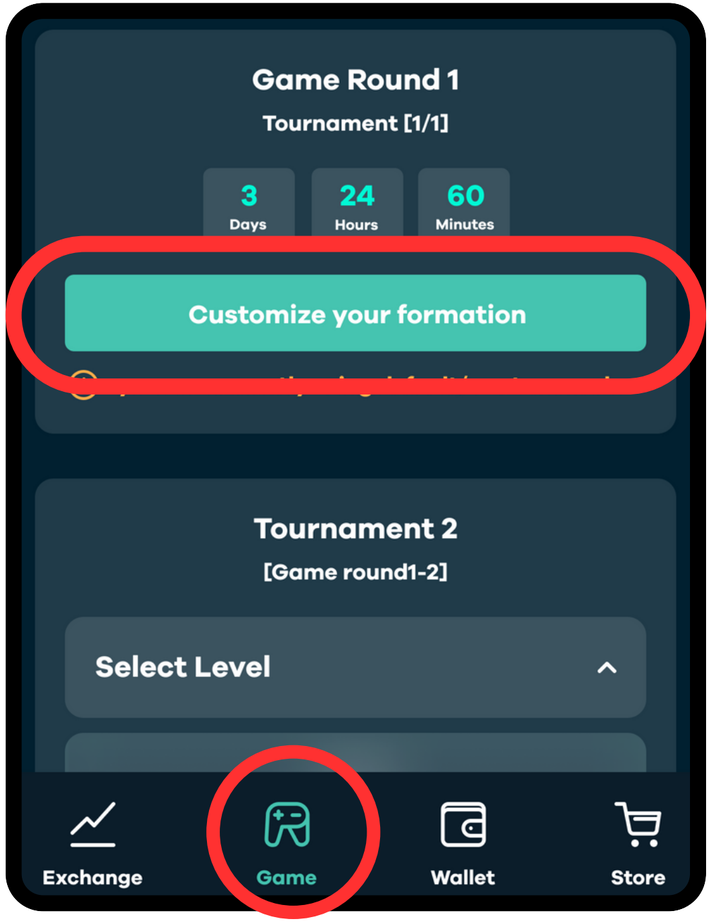
02

HOW TO DEPLOY THE FORMATION

To field your lineup in the Starcks game and participate in competitions, here is a step-by-step guide that makes the process simple and clear:

Step I: Access the Game Section

Navigate Starcks.IO: Open the Starcks platform and log in to your account.
Go to 'Game': Select the 'Game' section found in the main menu.
'Insert Formation' Option: Within the 'Game' section, you will find the 'Insert Formation' option. Click it to begin composing your team.

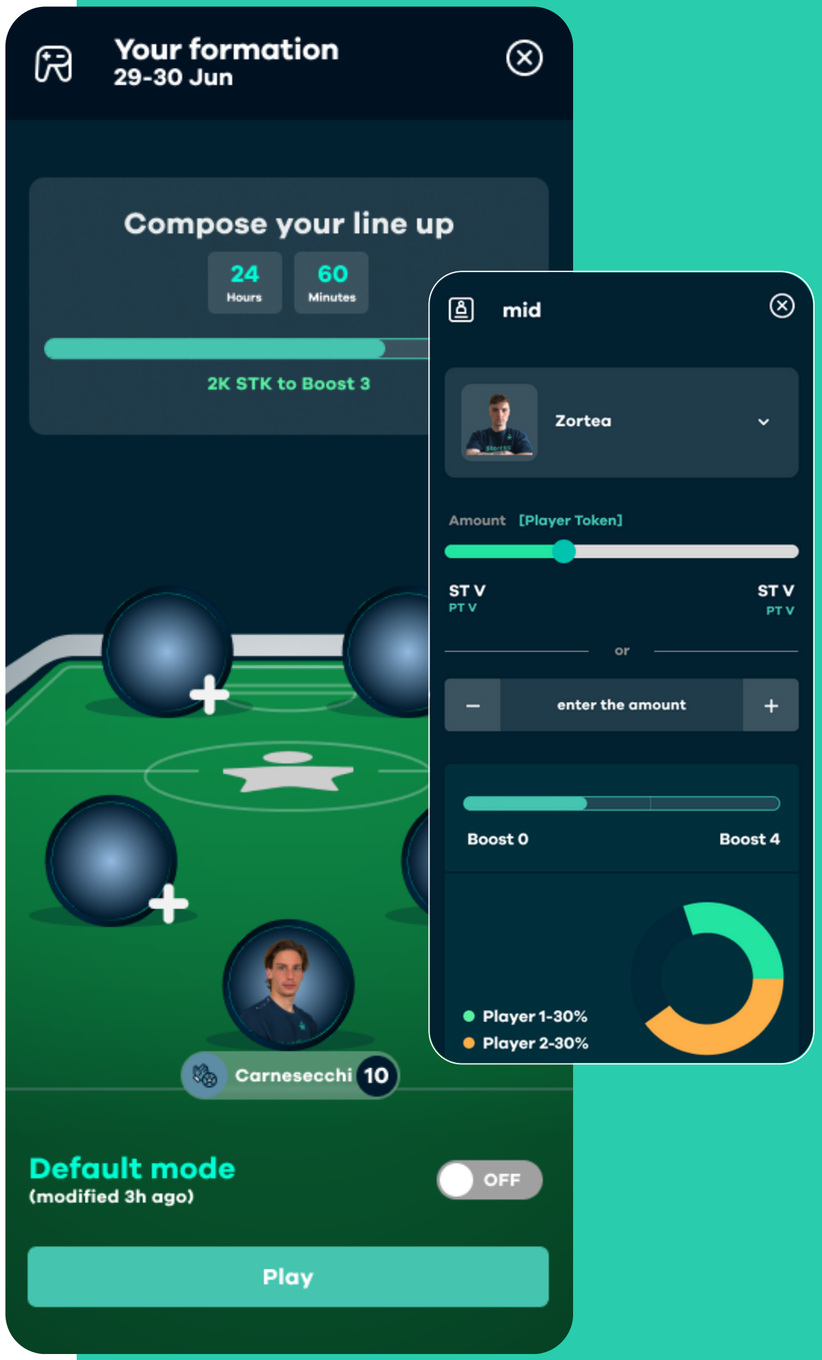


02

HOW TO DEPLOY THE FORMATION

Step 2: Compose Your Team

Choose Up to Five Star Player Tokens: You can select up to five players represented by your Star Player Tokens to form your ideal team. Determine the Percentage of Tokens to Deploy: For each player you choose, you must decide what percentage of your tokens to deploy. This percentage will determine the weight that individual player will have on your team's final score.

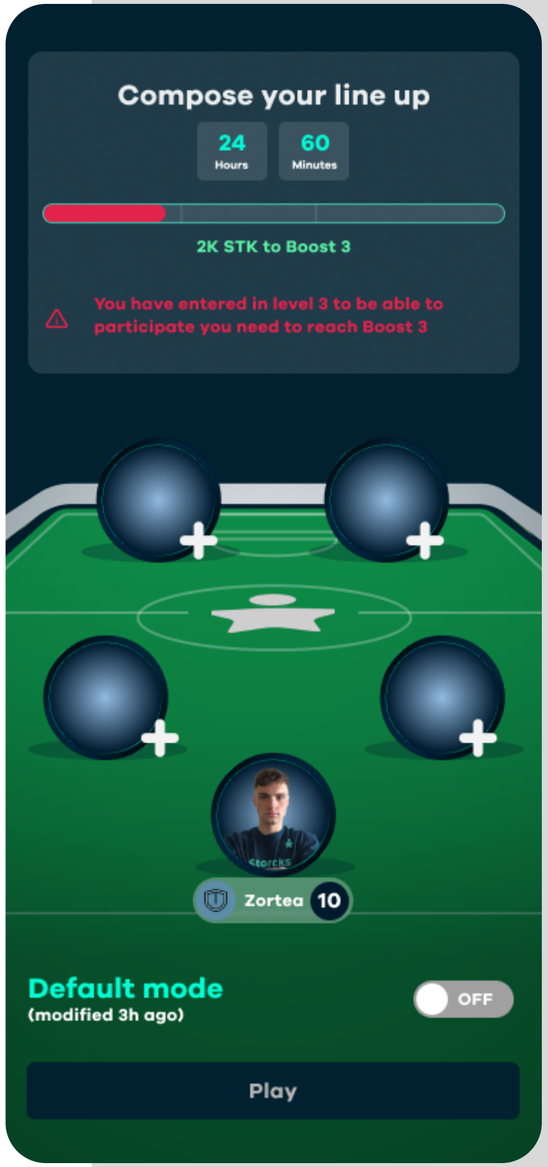


02

HOW TO DEPLOY THE FORMATION

Step 3: Deployment Requirements

Minimum Value per Player: Make sure that the amount of tokens deployed per player meets the minimum requirement, which is that the Star Token (STK) counter value is greater than $500STK. This is essential in order to field a player in your lineup.



02

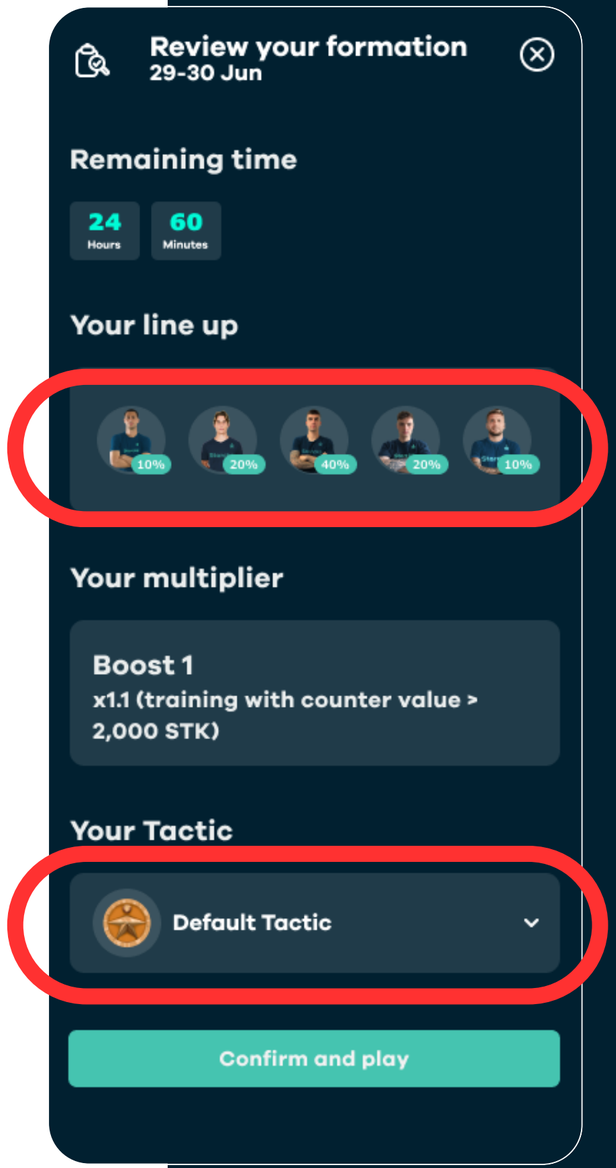
HOW TO DEPLOY THE FORMATION

Step 4: Confirm Your Training

Review Your Choices: After you have selected your players and assigned percentages, do a final review of your lineup to make sure everything is as you wish.

Confirm and Deploy: Once you are satisfied with your lineup, confirm your selection. Your team will now be deployed and ready to compete in Starcks game challenges.

Remember that strategy in choosing players and distributing deployed token percentages is critical. Each decision can affect your team's final score and your chances of winning the prizes up for grabs in the various Starcks Game competitions. Good luck and may the best strategy win!



02

HOW TO DEPLOY THE FORMATION

The Star Algo

Starcks' Star Algo is a proprietary algorithm that plays a key role in determining the value of Star Player Tokens on the platform. Here is a simplified explanation of how it works:

Basis of Operation:

Performance Analysis: At the end of each game, the Star Algo analyzes the performance of players based on real statistical data, such as goals scored, assists, interceptions, successful passes, and other parameters relevant to soccer.

Score Calculation:

Each performance is translated into a numerical score, known as the "BaseScore." This score represents the quantitative assessment of the player's performance in that specific game.

Adjusting Factors:

AdjustedScore: The base score can be adjusted according to various factors, such as the importance of the match, the difficulty of the opponent, and other significant events. This adjusted score, or "AdjustedScore," reflects a more accurate assessment of the player's contribution.

02

HOW TO DEPLOY THE FORMATION

Burn and Issue Mechanism:

Burn and Issue Mechanism: Token Burn: If a player's score is below a certain threshold, the Star Algo can "burn" a portion of the tokens associated with that player, thereby reducing their amount in circulation and potentially increasing the value of the remaining tokens.

Issuance of New Tokens:

Inversely, if a player exceeds certain performances, the Star Algo may decide to issue new tokens, increasing the supply and adjusting the value of the token to the player's performance.

Normalization:

The Star Algo includes a normalization process to ensure that the system remains balanced and that tokens from different players are comparable and competitive within the platform.

Goal of the Star Algo:

Performance-Value Linkage: The main goal of the Star Algo is to closely link the value of Star Player Tokens to the actual performance of players on the field, thus offering users an engaging game dynamic deeply rooted in the real world of soccer.

In essence, the Star Algo is the beating heart of Starcks, allowing users to experience a game that rewards accurate analysis of player performance and investment strategy in tokens.

To learn how the algorithm works in detail, you can check out our in-depth discussion of individual calculation criteria here

02

HOW TO DEPLOY THE FORMATION

TACTICS

In the game of Starcks, tactics are special items that you can purchase in the Starcks Store to enhance your game strategy and gain significant bonuses. Here is a detailed explanation:

What is a Tactic:

Consumable Items:

actics are items that you can use only once and last for the duration of a game day.
Purchase: You can buy them with 1,000 Credits or by spending 46 $STK.

Bonus:

They offer bonuses during matches if you can meet the specific requirements of each tactic.

How to Activate a Tactic:

Minimum 5 Players: In order to activate a tactic, you must field a formation of at least 5 players.

Weight of Players:

Each player deployed must account for at least 12.5% of the total, which means that no player can weigh more than 50% of the total supply of the lineup.

02

HOW TO DEPLOY THE FORMATION

Requirements and Bonuses of Tactics:

1-2-1-1:
Deploy 1 Goalkeeper + 2 Defenders + 1 Midfielder + 1 Striker to get a bonus of x2.3.

3-1-1:
Deploy 3 between Goalkeepers or Defenders + 1 Midfielder + 1 Striker to receive a bonus of x2.2.

2-2-1:
Deploy 2 between Goalkeepers or Defenders + 2 Midfielders + 1 Striker for a bonus of x2.

2-1-2:
Deploy 2 between Goalkeepers or Defenders + 1 Midfielder + 2 Strikers for a bonus of x1.8.

1-2-2:
Deploy 1 between Goalkeeper or Defender + 2 Midfielders + 2 Strikers for a bonus of x1.7.

02

HOW TO DEPLOY THE FORMATION

The Role of Tactics in the Game:
Tactics add an extra layer of strategy to Starcks Game. They allow you to plan and optimize your formation to maximize available points and bonuses, making the game more dynamic and engaging. Choosing the right tactics based on the players at your disposal and the scheduled matches can make the difference between a landslide victory and a defeat. By using tactics effectively, you can make the most of your team's potential and climb the rankings in various competitions.

02

HOW TO DEPLOY THE FORMATION

BOOST LEVELS

In the All Season tournament each level reached by your team corresponds to an incremental bonus :

Boost I:
xI.I (training with counter value > 2,000 STK)

Boost 2:
xI.2 (training with counter value > 5,000 STK)

Boost 3:
xI.3 (training with counter value > I0,000 STK)

In the **biweekly tournaments** on the other hand, the three different levels, correspond only to the levels of the tournaments in which you will participate

Clearly, a higher level tournament will give you access to greater rewards. You will still be sure to compete on an equal footing with all tournament participants of your same level

03

ALL SEASON

The all season tournament is a season-long tournament, and prizes are awarded to the top 60 finishers with over €20000 in prize money.

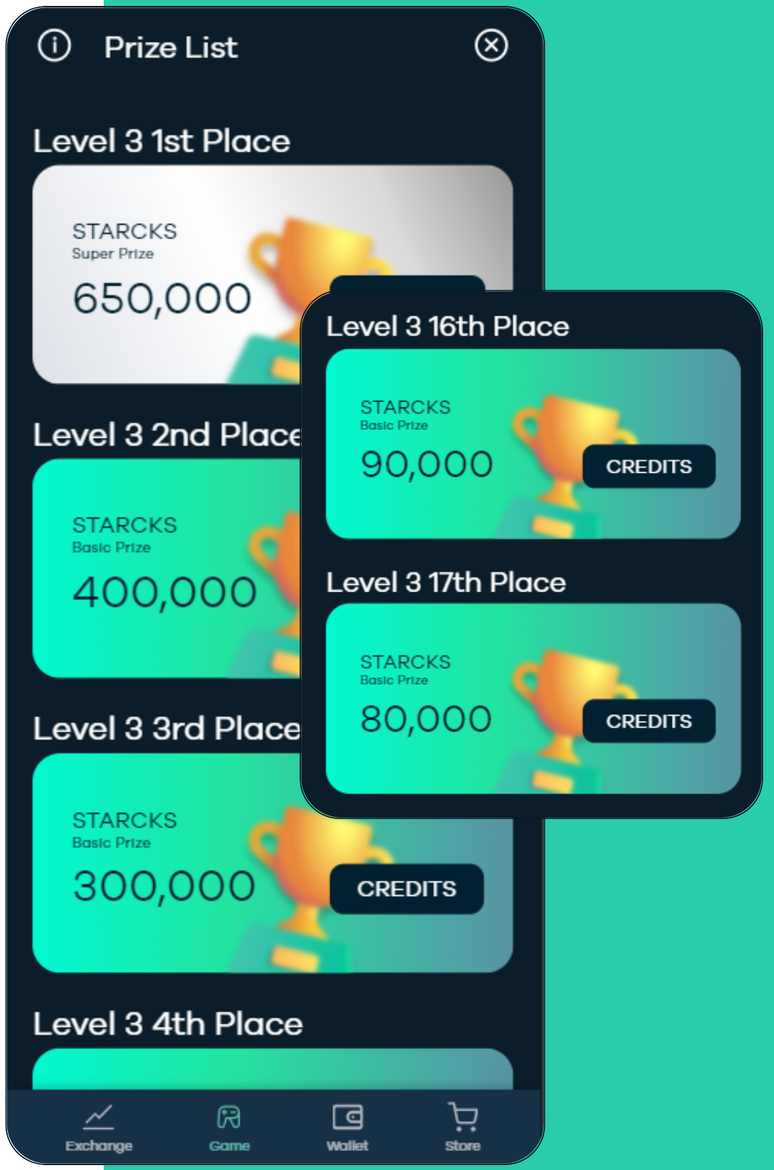
The ranking is updated day by day by adding up the points obtained with the lineup deployed.

(The score you get on the All Season day and the biweekly tournament day is different because in the All Season the Boost is added up.)

04

BISETTIMANALE

The biweekly tournament has a two-day Series A duration, at the end of which a ranking is created and the winners receive prizes. With the biweekly tournament, every two days of Series A, the standings reset and everyone has an equal chance to win and receive a prize. There are 60 winners every two days of Serie A, totaling about €5500 every two weeks and over €80000 for the entire season. This approach aims to incentivize community growth and give everyone a chance to win.



04

BISETTIMANALE

Users must sign up for a biweekly tournament, and there are three different types based on STK supply

1.5K

Level I:
The sum of tokens deployed for your team must have a counter value of at least I,500 STK

15K

Level 2 :
The sum of tokens deployed for your team must have a counter value of at least I5,000 STK

30K

Level 3:
The sum of tokens deployed for your team must have a counter value of at least 30,000 STK

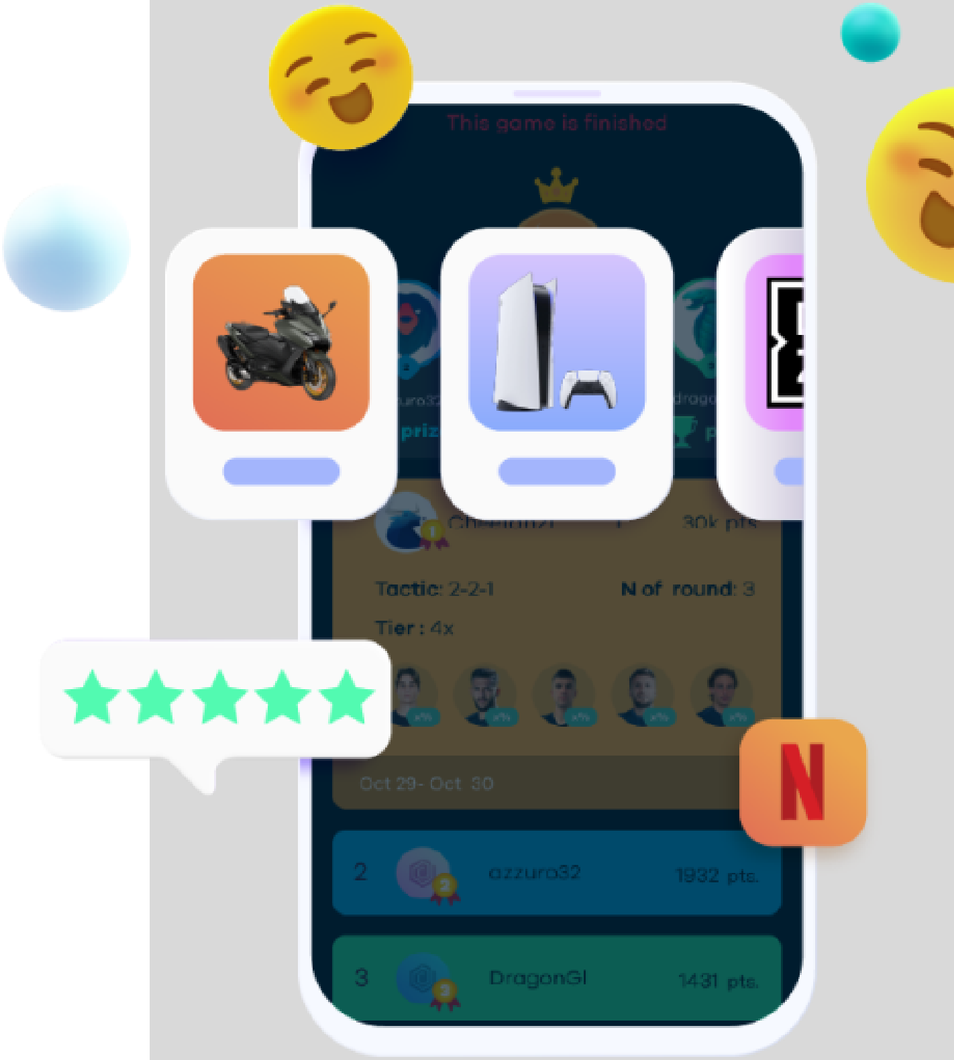
05

AWARDS

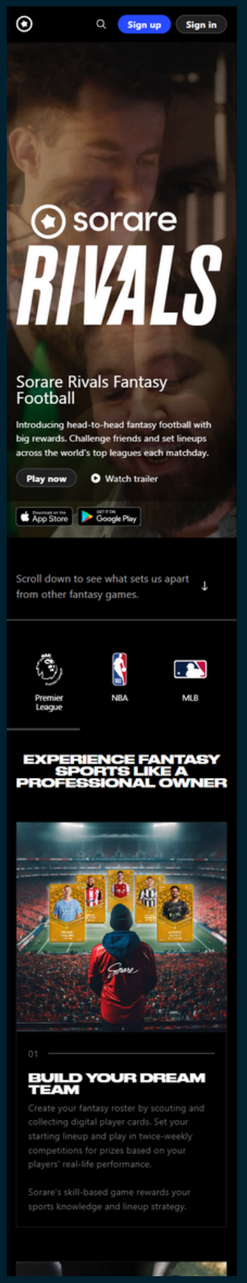
Prizes are awarded by entering the awarded positions on the leaderboards.

Later at the end of the day, the user will receive a notification, through which the notary validates the winning. The user accepts the prize, after which the shipment of the prize is awaited.

Typically, the timeframe from winning to receiving the prize varies from one to two weeks.



Starcks or Sorare



01

What are the differences between Starcks and Sorare

Starcks and Sorare are both pioneers in the world of blockchain and token-based games in soccer, but they have some key differences in their approach and game mechanics:

Starcks:

Fixed Token Supply: Starcks guarantees a limited amount of tokens for each player, avoiding hyperinflation and maintaining the value of tokens over time.

Non-inflationary system: Through the burn mechanism, tokens that do not perform can be reduced, thus maintaining the balance of supply and demand.

Burn Algorithm: This system reduces the amount of tokens in circulation based on players' performance, directly affecting their market value.

Rewards for Token Holders: Users who choose to lock their tokens in the wallet receive rewards, incentivizing long-term holding.

Advantages in Pre-sales: Buying tokens during pre-sales can offer more advantageous terms than buying them later in the open market.

Formation Customization: Users can customize their formations based on the tokens they own, adding a strategic layer to the game.

Long-Term Sustainability: The purchase of image rights through pre-sale provides a solid financial foundation for the platform.

01

What are the differences between Starcks and Sorare

Sorare:

Annual Token Release: Sorare releases new player cards each season, which could lead to an increase in overall supply year after year.

Partnerships with Teams and Leagues: Sorare works directly with teams and leagues to obtain image rights, offering an extensive catalog of players.

Focus on Collectibles NFT: Sorare focuses more on the collectible aspects of tokens, with different rarities and limited editions for player cards.

Integrated Fantasy Football: Fantasy play is a central element of the Sorare experience, with users competing in leagues based on players' actual performance.

No Burn Algorithm: Sorare does not implement a burn mechanism for its cards, which means that the amount of a particular card remains unchanged over time.

Secondary Market for Trading: Sorare offers a vibrant secondary market where users can buy and sell player cards.

In summary, while Starcks focuses on a token-based approach with a fixed supply and incentive mechanisms for token holders, Sorare focuses more on collectibles and fantasy play, with an annual release of cards and a focus on partnerships with teams and leagues. Both offer unique and complementary experiences in the blockchain-based gaming landscape in soccer.

Grazie.
